Re: Federal Safety Standard # III  
Interior Mirror  
Securing Screw  
Stem To Base

1968 Austin Healey Sprite  
and MG Midget  
1968 MGB Roadster

A fibre screw, Part Number BHA 4788, is used to secure the interior mirror to its base on the above models.

It is absolutely essential this screw is tightened to a maximum of 5 lbs./ins. and no other screw of any design is used, as it is designed to break under a predetermined load.

Repositioning and/or substitution of the exterior mirrors prior to vehicle sale, could contravene the field of view and other requirements as specified in Federal Motor Vehicle Safety Standard # III.
