
LUCAS WORKSHOP INSTRUCTIONS

CAMSHAFT-SPEED MAGNETOS**LUBRICATION****Correction to Section D-3, Paragraph 2 (a)**

All models of camshaft-speed magnetos (i.e. models 4VR, 4VRS, 4VRA, 6VR, 6VRS and 6VRA) are now fitted with an oiler in the base for the lubrication of the shaft bearing and automatic timing control or impulse starter. Every 2,000 miles, or every 100 running hours, the magneto base should be filled **to the level of the lubricator plug** with good quality thin machine oil.
