

LUCAS WORKSHOP INSTRUCTIONS

CONTROL BOXES MODEL RB310

SPECIAL VOLTAGE SETTING

Control boxes Model RB310 Service Nos. 37195 and 37277 are fitted to Bentley Series "S" and Rolls-Royce "Silver Cloud" vehicles in conjunction with Models C47 and C48 generators. Design details are as given in Section F-4 for other 12-volt units having field parallel resistors, except for the electrical setting of the voltage regulators, which, hitherto, have been set to 14.5—14.8 volts, but which in future should be set to 14.8—15.1 volts at 1500 generator r.p.m. and all normal ambient temperatures.

The revised setting is denoted in production by adding suffix letter "L" to Service No. 37195 and suffix letter "D" to Service No. 37277.
